Configuration comparison

This model	Push Up Combo, inground
Mounting alternative	UP222SM

Related fitness activities	Push-up, chin-up and leg-extension stations exercise different muscle groups
Site design	Follow exact equipment clearances, foundation and surfacing requirements

The combination push-up configuration provides two working heights and curved grips for different upper-body exercise positions. Fitness equipment requires the installation and fall-surface details applicable to its precise model. The ActionFit range is designated for ages 13 and older. Powder-coated supports and outdoor fastening systems require routine inspection and maintenance in public fitness areas. Confirm the current model-specific clearance space, training envelope, anchoring and surfacing requirements before preparing installation drawings. Nearby fitness stations may form a coordinated workout circuit, but another exercise station or mounting alternative is not included with this catalog item.
