Product Image

Description

Premium Performance

The 30 Ft Deck Height Stainless Steel Spiral Tube Slide is a premium, large-scale playground and architectural feature, engineered for projects where performance, safety, and visual impact are critical.

Designed for extreme elevations, this enclosed spiral slide provides a controlled, secure descent while delivering an unforgettable experience for users of all ages.

At a 30-foot deck height, safety and precision are essential. This slide features:
- A fully enclosed tube design to prevent fall risk
- Carefully engineered spiral geometry for controlled speed
- Optimized entry and exit transitions
- Structural integrity designed for high-load, high-use environments

Tube slides are strongly recommended at this elevation, where open slides would not provide

adequate containment.

Every 30 ft spiral tube slide is custom-designed to fit your project:
- Site-specific layout and orientation
- Custom entry and exit configurations
- Integration with towers, decks, or architectural structures
- Optional theming, colors, and finishes

We provide complete project support, including:
- Design consultation
- Detailed engineering
- Fabrication
- Installation guidance
