Product Image

Description

High Quality Product

The 5 Ft Deck Height Stainless Steel Curved Tube Slide is a durable, enclosed playground slide designed to provide a safe and enjoyable experience for lower deck height installations. Its curved tube configuration adds an element of fun while maintaining a controlled and secure descent, making it especially well-suited for younger users in residential, school, or light commercial environments.

Constructed from high-quality stainless steel, this slide offers long-term performance that far exceeds traditional plastic alternatives. It resists corrosion, fading, cracking, and UV damage, ensuring consistent appearance and function over time. The smooth stainless steel surface allows for a reliable sliding experience, while also reducing static electricity buildup compared to plastic slides. In addition, stainless steel maintains more stable surface temperatures, helping prevent excessive heat buildup in direct sunlight.

The enclosed tube design enhances safety by helping to contain the rider throughout the entire slide path, minimizing the risk of falls and providing peace of mind for parents, caregivers, and facility operators. The gentle curved layout adds excitement without creating excessive speed, offering a balanced combination of fun and control.

Designed specifically for a 5-foot deck height, this slide includes a mounting plate for secure attachment to your play structure. Proper installation is important to ensure the correct slope and safe operation, so providing the exact deck height allows for optimal alignment and performance. Custom mounting solutions may also be available for unique applications or non-standard structures.

This curved tube slide is ideal for a wide range of applications, including backyard playgrounds, residential playsets, schools, daycare centers, parks, and indoor play areas. Its compact size, combined with the added safety of an enclosed design, makes it a versatile choice for projects where space, safety, and durability are all important considerations.

As with all large playground components, this slide ships via freight due to its size. Delivery will require appropriate unloading arrangements at the site, and commercial delivery locations may help reduce shipping costs. For best results, it is recommended to coordinate project details in advance to ensure proper fit, installation, and overall satisfaction.
