Description

Safe & Durable

The 13 Ft Deck Height Stainless Steel Straight Tube Slide with Windows is designed for elevated playground installations where safety, durability, and visibility are key considerations. Featuring a fully enclosed straight tube configuration with integrated viewing windows, this slide provides a secure and controlled descent while enhancing the overall user experience through added light and visibility.

Constructed from high-quality stainless steel, this slide is built for long-term performance in both residential and commercial environments. It resists cracking, fading, and UV degradation, maintaining its strength and appearance even with continuous outdoor exposure. The smooth stainless steel surface ensures a consistent sliding experience while reducing static electricity buildup compared to plastic slides. It also maintains more stable surface temperatures, helping improve comfort during use in direct sunlight.

The straight tube design delivers a direct and predictable ride path, making it suitable for a wide range of users while maintaining controlled speed. At a 13-foot deck height, the enclosed structure is essential for rider safety, helping to fully contain users throughout the entire slide path and reduce the risk of falls. Integrated windows enhance both safety and enjoyment by allowing natural light into the slide and providing visibility for supervisors and riders. This added openness can help reduce the enclosed feeling while maintaining the protective benefits of a fully enclosed design.

Designed specifically for 13-foot deck heights, this slide includes a mounting system for secure attachment to a variety of play structures. Providing the exact deck height during ordering ensures proper slope and alignment, which are critical for safe operation and optimal performance. Custom mounting configurations may also be available to accommodate unique layouts or specialized project requirements.

This stainless steel straight tube slide with windows is ideal for playgrounds, parks, schools, daycare centers, and commercial recreational facilities. It can also be integrated into custom-built or architectural environments where durability and long-term reliability are priorities. The addition of viewing windows enhances engagement while maintaining a strong focus on safety and performance.

Due to its size and construction, this slide ships via freight and requires proper planning for delivery and unloading. Commercial delivery locations may help reduce shipping costs, and coordinating project details in advance will help ensure a smooth installation process and the best overall results.
