Product Image

Description

Fully Enclosed Experience

The 7 Ft Deck Height Stainless Steel Spiral Tube Slide with Window offers a balance of safety, durability, and engaging design for mid-height playground installations. Featuring a fully enclosed spiral configuration with an integrated viewing window, this slide provides a fun, winding descent while allowing light and visibility inside the slide for an enhanced user experience.

Constructed from high-quality stainless steel, this slide is designed for long-term performance in both residential and commercial settings. It resists cracking, fading, and UV degradation, maintaining its structural integrity and appearance over time. The smooth stainless steel surface ensures a consistent sliding experience while reducing static electricity buildup compared to plastic slides. It also helps maintain more stable surface temperatures, improving comfort during use in direct sunlight.

The spiral tube design introduces a dynamic, twisting path that adds excitement while controlling speed through engineered curvature. At a 7-foot deck height, the enclosed structure helps contain the rider throughout the slide, improving safety while still delivering an enjoyable ride. The integrated viewing window allows natural light into the slide and provides visibility for both riders and supervisors, helping reduce the enclosed feeling while maintaining the protective benefits of a fully enclosed tube.

Designed specifically for 7-foot deck heights, this slide includes a mounting system for secure attachment to a variety of play structures. Providing the exact deck height during ordering ensures proper slope and alignment, which are essential for safe operation and optimal performance. Custom mounting options may also be available for unique installations or design requirements.

This stainless steel spiral tube slide with window is ideal for backyard playgrounds, schools, parks, daycare centers, and light commercial environments. It can also be incorporated into custom or themed play structures where durability and visual appeal are important. The combination of a spiral design and window feature makes it both a functional and visually engaging addition to any play space.

Due to its size and construction, this slide ships via freight and requires planning for delivery and unloading. Commercial delivery locations may help reduce shipping costs, and coordinating project details in advance will help ensure a smooth installation process and the best overall results.
