Description

Durable Tube Component

Complete your tube slide system with the Tube Exit – Double Wall, a durable runout component designed for commercial playground environments. Featuring a double-wall construction, this tube exit provides added strength, stability, and long-term durability in high-traffic play areas.

Engineered to create a smooth and controlled transition from enclosed tube slide to ground level, the double-wall design enhances safety and structural integrity while maintaining a clean, professional appearance. This tube exit is ideal for schools, parks, churches, indoor playgrounds, and community play spaces, and works well for both new installations and replacement applications.

Built to withstand daily use, the Tube Exit – Double Wall is a dependable finishing component for modern tube slide systems.
