Structure Weight 3900

Description This model priced WITH shade cover!

Playgrounds designed with Maximo are favorable solutions for organizations, such as park districts, city boards, and large school districts with large spaces and high end-user volumes These types of play spaces frequently need to provide exciting play with safety, low maintenance, a higher child capacity to handle the volume, and a larger footprint that complements the flow of play.

Maximo playgrounds provide you peace of mind as it is the workhorse of the industry. With its

large supports and broad platforms, a Maximo playground can handle end-user volumes without constricting the excitement and enthusiasm found in the flow of play. The predictable reliability of the materials sourced for Maximo combined with the skilled craftmanship at the factory produces equipment that is durable and requires less maintenance, so your play space looks great and is available and open with fewer disruptions.

Maximo playgrounds are artistically crafted with your choice of 5.0" OD galvanized steel or aluminum support posts which are, along with all of the steel handrails, barriers, gates, and climbers, coated with a baked-on polyester powder coat finish for a lifetime of protection against the elements. All steel decking and stairs are encased in a longlasting PVC coating. The three-dimensional plastic slides, panels, roofs, and climbers are rotationally molded using virgin compounded resins that feature greater UV breakdown resistance over dry blended resins.The HOPE sheet plastic climbers and activities are specifically manufactured at the factory for high-quality control and not purchased from a supplier.
