Description

Open Spiral Slide for 8 foot deck
Whether you call it a Twisty Slide, Curly Slide, Spiral Slide, Helical Slide or Helix Slide, the kids will call the playground slides pure playground fun!The spiral slide is the only solid, welded and one piece aluminum slide in the industry. It features high outer walls and deep spirals for maximum safety. The unitized construction eliminates poor fitting and often dangerous mechanical connections. The unique spiral design minimizes the required space to install. We offer complete service from design, detailed engineering ,through manufacturing to installation. Many slides may be utilized as a pool slide or water slide (also called a FLUME slide). A DRY SLIDE may be used as an outdoor slide or indoor slide. On a hill, slope or architectural buildout, you may be looking for an embankment slide, hill slide, or slope slide. A THEME SLIDE may incorporate unique colors, or added theme events or features. A CUSTOM SLIDE may be designed to fit your unique space, theme, concept or idea. Many office, business or commercial venues are looking for a STAINLESS STEEL slide.

The Fireman's chute is designed with larger specification components for adult use rather than typical children's playground measurements. Metal Slide testing finds results contrary to popular belief as cooler than plastic slides. Temperature testing finds surfaces an average of 8

degrees cooler. This means even in the most adverse positioning toward the sun they maintain cooler temperatures than even the lightest plastic color slides.So, no, metal playground slides are NOT hotter than plastic! No more worries about color fading from UV exposure. Cold temperature cracking is eliminated. Aluminum and metal slides are more accommodating to children with cochlear hearing implants with reduced static electricity. A plastic slide can generate up to 60,000 volts of electricity! These slides also provide superior vandal resistance such as grafitti and burning. Standard and custom colors available in a tough powder coated finish of an electostatically applied TGIC polyester powder. Repair or repainting is also easier.

Pricing does not include deck, stairs or platform barriers. DunRite Playgrounds is YOUR source for a metal playground slide and many creative or fun playground slides.

FREIGHT NOTE: Slides are big and can become costly when trying to ship. With only a few exceptions, slides must ship by common carrier (freight truck). Our online estimator will not provide the correct price for these items. Freight pricing is a complex formula including factors such as: weight, dimensions, your location or your type of location. To further complicate the shipment, most slides need to be placed on a skid or crate for shipment. This added weight means it probably wouldn't be more to ship two or three at the same time as one slide. Be sure to consolidate all of your purchases for the project into one order. Freight to a commercial location is usually less expensive. A location qualifies for commercial pricing is the address of delivery has a freight dock. All other locations are classified as residential. While a church, school or retail shop isn't a residential venue, it is usually classified as such by the freight company. The delivery address for a shipment must be attended. Freight carriers charge a surcharge or add on fee for delivery notification, appointment or scheduled delivery is an added fee. Many times with large or heavy freight, a liftgate is a useful aid to get material from the truck to the ground. In the case of slides, a liftgate can not be used as they are not deep and wide enough to allow the slide to fit on them. Unloading your slide is your responsibility and may take one or more persons to do the job. Please call or email your project information and we will ensure you have the correct item, and work with you to make sure that you receive the best value and most appropriate solution! We don't mark up the carrier provided pricing, that isn't our business.

What do you remember from your childhood? Do you remember the play ground slides? Play slides are on the top of the list for kid choice play, right up there with a swing set. Did you have a slide for backyard play? Backyard playground slides or backyard swings recall some of our fondest memories of growing up. The playground slide and our school friends were truly "the good old days."

Looking for a metal spiral slide for sale often results in a price tag of several hundred thousand dollars! Consider our patented and propriety LMA and FSS Series slides! Searching for spiral slides for playgrounds can be a daunting task, with more options than you want. A spiral playground slide (sometimes called a twist slide or twisted slide) is often the crowning jewel and the big kids end a play structure at the local school or park. If you don't have room for a

complete playground system, freestanding slides may be worth consideration. Don't try to find a spiral slide kit, this really isn't a do-it-yourself product. Playground slide dimensions contain lengthy and complicated factors to make safe and fun play. An affordable spiral tube slide is most likely going to be a plastic slide. A stainless slide isn't outrageous in price if it is a flat bedway, straight slide. Turns and curves are when a stainless steel slide becomes more expensive. The slide chute may create a curvy slide with slight or gentle turns like a veer right slide or veer left slide. Angles and turns may create a 90 degree tube slide, such as a left turn slide or right turn slide.

Keeping the price down may lead you to search for used metal slides for sale. Used and sale in the same sentence with slides are probably not a good idea when considering playground equipment. Someone getting rid of a slide should make you wonder if something is wrong with it! Watch out for an ad for a "used playground slide." A commercial slide may cost more than a residential slide due to thickness, dimensions and durability factors. Commercial slides are usually needed for any place other than your backyard treehouse slide. Residential playground equipment is typically manufactured with different materials and to different standards or specifications. A slide for playground use must meet higher standards and more restrictive guidelines. Stainless steel playground slides may also be used off of the playground, so don't let a name confuse your search. This means a metal kids slide may also be used for adults, as an adult slide.

Threehouse Slides are popular and there are TV programs how some really fancy designs and construction. Slides for treehouse use aren't really built any differently than for other locations, Consider the elevation and direction along with age group and supervision level. Your plastic slide for treehouse use may be the most fun and fastest way to exit the kid's clubhouse!

Trying to find the right playground slide for sale could be a tough task. Let us simplify your slide search, how high is the deck? Start there! Custom playground slides don't cost more than a standard slide, we don't charge a premium to guide you. If you just want to know how to make a metal playground slide, you may end up missing some of the safety guidelines that an experienced manufacturer is familiar with. Don't forget playground shades. Playground shade will not only protect your children from direct sun, heat and harmful UV rays, but will also help protect your playground equipment.
