Description

12 foot playground slide
Are you looking for a slide for a 12 foot deck height (24 foot long) or a 12 foot slide (12' long) for a 6 foot deck height?

Installation is easy! The entrance end of the slide bedway is extended and bent over to the proper angle for your slide at this deck height. When you order, be sure to let us know the EXACT height of your deck, so we can adjust the angle properly. Even if your deck is only a few inches off in height, the slope of the slide will need to compensate properly to achieve the required angle for safe descent. Place the slide against the bedway and the folded over portion now rests vertically, against the fascia of your deck or landing. Attach with deck bolts through predrilled holes, and tighten. A solid weld of the stainless steel bedway to the side rail improves the overall structural integrity of the slide. This eliminates rusted screws and pinch points along the bedway seen in cheap grade slides.

We offer complete service from design, detailed engineering ,through manufacturing to installation. Many playground slides may be utilized as a pool slide or water slide (also called a

FLUME slide). A DRY SLIDE may be used as an outdoor slide or indoor slide. On a hill, slope or architectural buildout, you may be looking for an embankment slide, hill slide, or slope slide. A THEME SLIDE may incorporate unique colors, or added theme events or features. A CUSTOM SLIDE may be designed to fit your unique space, theme, concept or idea. Many office, business or commercial venues are looking for an aluminum slide or a STAINLESS STEEL slide.

Metal Slide testing finds results contrary to popular belief as cooler than plastic slides. Temperature testing finds surfaces an average of 8 degrees cooler. This means even in the most adverse positioning toward the sun they maintain cooler temperatures than even the lightest plastic color slides.So, no, metal playground slides are NOT hotter than plastic! No more worries about color fading from UV exposure. Cold temperature cracking is eliminated. Aluminum and metal slides are more accommodating to children with cochlear hearing implants with reduced static electricity. A plastic slide can generate up to 60,000 volts of electricity! These slides also provide superior vandal resistance such as grafitti and burning. Repair or repainting is also easier.

Does not include deck, stairs or platform barriers. DunRite Playgrounds is YOUR source for a metal playground slide and many creative or fun playground slides.

FREIGHT NOTE: Slides are big and can become costly when trying to ship. With only a few exceptions, slides must ship by common carrier (freight truck). Our online estimator will not provide the correct price for these items. Freight pricing is a complex formula including factors such as: weight, dimensions, your location or your type of location. To further complicate the shipment, most slides need to be placed on a skid or crate for shipment. This added weight means it probably wouldn't be more to ship two or three at the same time as one slide. Be sure to consolidate all of your purchases for the project into one order. Freight to a commercial location is usually less expensive. A location qualifies for commercial pricing is the address of delivery has a freight dock. All other locations are classified as residential. While a church, school or retail shop isn't a residential venue, it is usually classified as such by the freight company. The delivery address for a shipment must be attended. Freight carriers charge a surcharge or add on fee for delivery notification, appointment or scheduled delivery is an added fee. Many times with large or heavy freight, a liftgate is a useful aid to get material from the truck to the ground. In the case of slides, a liftgate can not be used as they are not deep and wide enough to allow the slide to fit on them. Unloading your slide is your responsibility and may take one or more persons to do the job. Please call or email your project information and we will ensure you have the correct item, and work with you to make sure that you receive the best value and most appropriate solution! We don't mark up the carrier provided pricing, that isn't our business.

What do you remember from your childhood? Do you remember the play ground slides? Play slides are on the top of the list for kid choice play, right up there with a swing set. Did you have a slide for backyard play? Backyard playground slides or backyard swings recall some of our

fondest memories of growing up. The playground slide and our school friends were truly “the good old days.” When working with any large playground slide, consider the venue and use. Plastic may be economical, but may not last as long as a metal slide. An aluminum slide or a stainless steel slide may last long, but cost more than its counterpart plastic playground slide. A stainless steel slide (playground variety) is long lasting and low maintenance option! Large slides might be needed for hillside slides for playgrounds. Searching for hillside slides for sale might be the wrong way to approach the situation. Rather than buy a slide and change the hill, we suggest that you provide some geometry and dimensions of your hill. (Visit our embankment slides page) We can design the slide to fit your project. This allows you a DIY Embankment slide, but we do the work! Searching for a hillside slide for sale is tough, you may need some custom solutions to be safe and function correctly. There are some required safety features and standards, but there are also options to configure your slide properly. Hillside slides or a “hill slide” for kids can be built into your architecture and provide a safe and fast descent down a hill to other play areas. An embankment may be a good location for outdoor slides for adults! The tall metal playground slide you remember as a child is more likely safer when close to the ground.

Keeping the price down may lead you to search for used metal slides for sale. Used and sale in the same sentence with slides are probably not a good idea when considering playground equipment. Someone getting rid of a slide should make you wonder if something is wrong with it! Watch out for an ad for a "used playground slide." A commercial slide may cost more than a residential slide due to thickness, dimensions and durability factors. Commercial slides are usually needed for any place other than your backyard treehouse slide. Residential playground equipment is typically manufactured with different materials and to different standards or specifications. A slide for playground use must meet higher standards and more restrictive guidelines. Stainless steel playground slides may also be used off of the playground, so don't let a name confuse your search. This means a metal kids slide may also be used for adults, as an adult slide.

Trying to find the right playground slide for sale could be a tough task. Let us simplify your slide search, how high is the deck? Start there! Custom playground slides don't cost more than a standard slide, we don't charge a premium to guide you. If you just want to know how to make a metal playground slide, you may end up missing some of the safety guidelines that an experienced manufacturer is familiar with. Don't forget playground shades. Playground shade will not only protect your children from direct sun, heat and harmful UV rays, but will also help protect your playground equipment.
